## Worrying Trends

- **Climate Change** is very real and visible - expectation of a permanent **+2.1 deg C** increase in global temperatures, statements from COP28 meeting in Dec 2023
- **2023 to be the hottest year on record** - 6 record breaking months and 2 record breaking seasons
- **10 hottest years on record** (174 years of data) were 2014, 2015, 2016, 2017, 2018, 2019, 2020, 2021, 2022, 2023 - a worrying long term trend
- **Extreme weather volatility swings** everywhere - Very hot summers, very cold winters. Covid global shutdowns for 2 years did not help.
- **Trend of aggressive and urgent Governmental push towards Decarbonization policies** – Introduction of Carbon taxation with a rapid ramp up of pricing into 2030, launching major carbon capture initiatives and Carbon exchanges
- More countries being co-opted to **Net-Zero Carbon Emission** targets by 2050
